- Acrylic bathware is molded of colorfast acrylic to provide a thick, smooth, super strong surface. It is reinforced with fiberglass for years of durable service.
 - The protective plastic film applied to the unit will leave a film upon the acrylic. To remove this film, use a soft cloth dampened with rubbing alcohol, mineral spirits or turpentine and wipe the area clean.
 - **NEVER USE ABRASIVE CLEANERS UNDER ANY CIRCUMSTANCES!**
 - For day to day cleaning, use only liquid or foam cleaners with a soft cloth. Read the label on any cleaning agent carefully to be sure it is for use on acrylic (i.e. non-abrasive, non-corrosive).
 - Dull areas may be restored or light scratches removed by rubbing with an automotive rubbing compound, followed by a light application of liquid or automotive car wax. If the unit has been damaged in any way, contact your local distributor for local repair service.
