## MATERIAL

**Molded-Stone® or Sheet Molding Compound (SMC)** contains a calcium based material that while being low cost, provides weight, strength, and fire retarding properties. The SMC process permits the use of longer glass fibers, which are placed in a multiple overlap of individual strands to permit total impregnation and wetting-out of the fibers without any fiber degradation that can diminish the strength imparting properties. The more thorough bond of the glass fibers reduces the amount of fibers necessary for maximum strength resulting in both lower weight and a denser, smoother, void-free product.

**Polyethylene** is the most common and popular plastic used in daily life. This very versatile material is used in products from water bottles to laundry tubs. FIAT polyethylene laundry tubs are made from high density polyethylene material that is light weight and durable.

## SHAPES AND OPTIONS

### Floor Mount Laundry Tubs
