

MOP SERVICE BASINS

FIAT® mop service basins set the industry standard for quality, durability, and reliability. With our line of Terrazzo and Molded-Stone® materials, and a comprehensive line of accessories, FIAT provides a complete package that is designed, engineered and backed by FIAT's commitment to be the best in mop service basins.

FIAT
PRODUCTS®

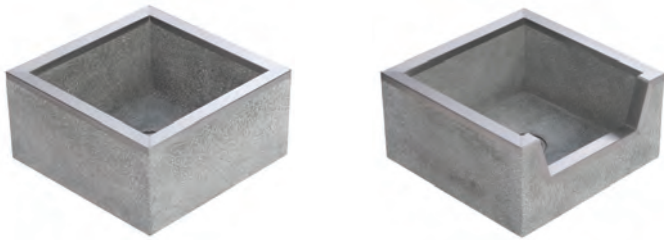

MATERIAL

There is not a finer and more durable material for mop basins than precast **Terrazzo**. FIAT®'s mop service basins, composed of black and white marble chips cast in grey Portland cement, have a minimum compression strength of 3,000 psi. They are also easy to maintain and install.

Molded-Stone® or Sheet Molding Compound (SMC) contains a calcium based material that while being low cost, provides weight, strength, and fire retarding properties. The SMC process permits the use of longer glass fibers, which are placed in a multiple overlap of individual strands to permit total impregnation and wetting-out of the fibers without any fiber degradation that can diminish the strength imparting properties. The more thorough bond of the glass fibers reduces the amount of fibers necessary for maximum strength resulting in both lower weight and a denser, smoother, void-free product.
